

Sustainability to the Max

BENEATH THE CITY

MAG Energy is working 70feet below the city of Detroit.

PARTNERING WITH DETROIT THERMAL, we provide reliable and efficient steam service for the many customers they serve with district energy.

District steam is used to heat and air condition buildings, sanitize medical devices, assist with cancer research, and in automotive processes and several other industries throughout the city.

Detroit Thermal has over 4 miles of underground steam tunnels and 25 miles of buried steam pipe as part of their distribution system.

Our skilled professionals help to provide waterproof insulation upgrades, and system leak repairs to reduce line losses and improve safety. These essential improvements ultimately reduce operating costs.

MAG Energy is YOUR full-service energypartner. With four decades of industry-leading experience and confidence, we deliver sustainable solutions at ANY scale.

25 Miles of buried steam pipe

\$1.2 million in funded projects

70 feet underground

10-year partnership

WE ARE PROUD TO COLLABORATE WITH DETROIT THERMAL ON MAINTAINING THIS CRITICAL INFRASTRUCTURE.
